14. (Amended) A submersible pumping system, comprising:

a submersible electric motor, comprising:

a plurality of modular motor sections, each motor section comprising a stator section and a housing section defining an outer surface of the submersible pumping system, wherein the modular motor sections are mechanically and electrically coupleable to form a motor of a desired length;

a rotor disposed within the plurality of modular motor sections; and

a submersible pump drivingly coupled to the rotor of the submersible electric motor.

21. (Amended) An electric motor for a submergible pumping system, comprising:

a plurality of stator sections adapted to form a stator of a desired length, wherein each of the plurality of stator sections comprises at least one of a threaded collar and a threaded portion adapted to receive the threaded collar to enable each of the plurality of stator sections to be mechanically and electrically connected to an adjacent stator section; and

a rotor shaft disposed through the plurality of stator sections.
